

NonBurned Brick Shaping Maker

The machine is our latest product developed on the basis of domestic and international advanced technology. Mainly used for suppressing the fly ash, river sand, mountain sand, ore powder, slag, building rubbish and other industrial waste residue into non-burned brick, steaming brick, cement brick and refractory bricks. It is the environmental protection construction equipment advocated greatly by the government.

Main features:

Press from up and down to save power.

Low water content, high final product ratio.

The strength of the final products is 1.5 times more than the same products processed by excellent wearable technique, the service life of the mould is 58 times more than the same products.

With the latest technology, the decelerator of the feeder bears the features of reasonable structure, beautiful appearance and long life.

Easy maintenance, high efficiency, is the favorable choice of the customers.

Feature Of NonBurned Brick Shaping Maker:

Type	Mould Quantity	Max. Pressure (KN)	Crank speed (r/min)	Mould dimensions (mm)	Production	Production capacity (piece/h)	Engine power (Kw)	Overall dimensions (mm)	Weight (Kg)
MZJ60-8A	8	600	30	240*115*53	1	2000	11	3494*1808*2239	5800
MZJ120-8A	8	1200	34	240*115*53	1	2000	11	3494*1808*2239	6200
MZJ160-8A	8	1600	30	240*115*53	1	2000	15	3494*1808*2337	7300
