

Fine crusher(Impact Crusher):

Fine Crusher(Impact Crusher) is made for granite, limestone, cement, iron ore, basalt, and ricer stone crushing, of excellent rigidity, simple structure and easy-maintenance, widely applied for the construction of road, bridge, expressway, airport, metallurgy etc.

Working principal Of Impact Crusher:

The material is crushed primarily in the first crushing chamber by the high speed moving rotator of the impact crusher against the hammer, and then screwed into the secondary chamber for fine crushing hereafter material being discharged.

Feature Of Fine crusher(Impact Crusher):

Model	Input opening (mm)	input (mm)	Output (mm)	discharging width	Cement grog (T/H)	Limestone (T/H)	With Power (KW)
800*400	400*185	<120	<5	5-20	20-30	35-45	45
800*600	500*250	<180	<5	5-20	35-40	45-55	55
800*800	550*330	<180	<5	5-20	35-45	55-65	55
1010*1	1000*3	<1	<5	5-20	45-55	65-75	75
